

NEW Lightweight Vacuum System

Unit shown behind an NLB StarJet® truck.

NLB's new trailer mounted vacuum system (BM17421) is designed to provide a portable, lightweight vacuum source for use with our HydroPrep™ or StarJet® line of water jet surface preparation/pavement marking removal tools. The system's small footprint and lightweight design allows it to easily be towed to the jobsite.

The vac system is driven by a 44 HP diesel engine and provides 1,000 CFM @ 6" to 8" of mercury. A 1,200 gallon tank collects all waste and debris and can be dumped via an integrated hydraulic system. The standard mounting package includes a three axel trailer.

Features:

- Provides 1000 CFM @ 6" to 8" of vacuum.
- 1,200 gallon debris tank with a zero leak hatch.
- 44 HP Deutz diesel engine.
- Remote filter housing allows easy access to the one piece 10 micron washable filter element.
- 2-part epoxy paint system on both the tank and trailer.
- Integrated blower silencing system for quiet operation.
- Standard mounting package includes a heavy duty three axel trailer.
