

# NEW Lightweight Vacuum System

NLB's new vacuum system is designed to provide a small, lightweight vacuum source for use with our HydroPrep™ line of water jet surface preparation tools. The system's small footprint and lightweight design allows it to be mounted in the bed of a one-ton truck, effectively turning any pickup truck into a vac truck.

The vac system is driven by a 44 HP diesel engine and provides 1,000 CFM @ 6" to 8" of mercury. A 220-gallon tank collects all waste and debris. A side-mounted port allows for the water to be drawn off with a solid handling pump. The standard mounting package includes a skid with forklift slots and lifting lugs. Available with transfer diaphragm pump (DM16497).

*Specifications subject to change without notice*

Unit shown mounted in the bed of a one ton truck.

### Features:

- Provides 1000 CFM @ 6" to 8" of vacuum.
- 220 gallon angled debris tank with a six lug zero leak hatch.
- 44 HP Deutz diesel engine.
- Remote filter housing allows easy access to the one piece 10 micron washable filter element.
- 2-part epoxy paint system on both the tank and skid.
- Integrated blower silencing system for quiet operation.
- Fits into a 4' X 8' space and weighs only 2000 pounds.
- Standard mounting package includes fork lift slots and integrated lifting lugs.
